# Benefits

Benefits

Leverage the full power of the Employee Services Portal and simplify your employee's benefits enrollment. Using a seamless integration between our hosted employee portal and Microsoft Dynamics, the Benefits module makes collection of employee elections for health insurance, retirement, life insurance, and other benefits simple and trouble free.

Administrators can easily review, accept and apply election changes which will update all required information in Dynamics including assignment of benefit and deduction codes. Eliminating the need for manual entry of information not only saves time but reduces the chance for costly mistakes caused by human error.

Full management of eligibility and enrollment information makes Affordable Care Act compliance simple and worry free. The easy to access employee portal provides tracking of offered, waived and enrolled coverage, employee dependants, and generates the appropriate IRS code for form 1095-C.

- Works with Microsoft Dynamics, with and without the Human Resources module

- Coordinates open enrollment online

- Accurately handles employee benefit eligibility all of the time

- Automatically update payroll with approved benefit elections

- Make employee benefit guides available to employees

- Track employee enrollment status any time

- Update benefit plans in one place

- Real-time management of employee qualifying life events

- Electronically submit health insurance enrollment to providers
